AMERICAN SPEECH-LANGUAGE-HEARING ASSOCIATION

The Nuts and Bolts of Medicare: Documentation, Coding and Billing

Daneen Grooms, MHSA
Director, Health Reform Analysis & Advocacy

ASHA Disclosure

Daneen Grooms, MHSA, Director of Health Reform Analysis and Advocacy

Financial: **Paid employee of ASHA**

Non-Financial: **Contributor of for-sale ASHA products on the topic of health plan payments, coding, and payer advocacy. Receives no compensation for product sales.**

Agenda

- Treating Patients with Medicare
  - Enrollment
  - Documentation
  - Billing
- Moving from Fee-for-Service to Value
- Coding for Reimbursement

Treating Patients with Medicare

Who Must Enroll In and Submit Claims Under Medicare?

Anyone who treats a patient who qualifies for Medicare due to:

- Age
- Disability

If you are treating a patient who qualifies for Medicare by virtue of age or disability, you are required to enroll in and submit claims to the Medicare program for covered services

- Section 1848 (g)(4) of the Social Security Act

https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNMattersArticles/downloads/SE0908.pdf

Enrollment Decision Tree

What is a Covered Service?

BOTH **Medically Necessary** AND **Skilled**

What is a Covered Service?

Services necessary to…

- Improve
- Maintain
- Prevent (or slow the deterioration of)

…the patient's current condition/function

Covered Services Limitations for Audiology

- Hearing and balance assessments
- Requires a physician order prior to testing
- Reason for test must be to determine a medical condition or the appropriate medical or surgical treatment for a medical condition

"Opt Out"

What does "opt out" mean?

- Essentially "opting out of Medicare" means you see Medicare beneficiaries but you do not enroll in or bill Medicare. In this case the clinician might charge the beneficiary directly.
- Unfortunately, under law, only certain categories of clinicians are allowed to "opt out." Audiologists and SLPs are not included.
- List of providers allowed to opt out can be found at: https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNMattersArticles/downloads/SE1311.pdf

Can an Unenrolled SLP Bill Under the NPI of an Enrolled SLP?

Locum tenens is the closest Medicare has to this type of arrangement, and it **does not include audiologists and SLPs**

Locum Tenens

It is a longstanding and widespread practice for ***physicians*** to retain substitute ***physicians*** to take over their professional practices when the regular ***physicians*** are absent for reasons such as illness, pregnancy, vacation, or continuing medical education, and for the regular ***physician*** to bill and receive payment for the substitute ***physician's*** services as though he/she performed them. The substitute ***physician*** generally has no practice of his/her own and moves from area to area as needed. The regular ***physician*** generally pays the substitute ***physician*** a fixed amount per diem, with the substitute ***physician*** having the status of an independent contractor rather than that of an employee. These substitute ***physicians*** are generally called "locum tenens" ***physicians***.

https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/downloads/clm104c01.pdf

Incident to Billing: SLP

The Medicare Benefit Policy Manual (Chapter 15, Section 60) describes "incident to" services as:

> "Incident to a physician's professional services means that the services or supplies are furnished as an integral, although incidental, part of the physician's personal professional services in the course of diagnosis or treatment of an injury or illness."

For an SLP to deliver the service incident to a physician, he/she must have the direct supervision of the physician.

Incident to Billing: Audiology

Section 1861(II) of the Social Security Act prohibits audiology services from being billed "incident to" the physician.

Free Services

Free services can be given if associated with a written policy that applies to all patients regardless of payer. If Medicare beneficiaries fall under the free services policy, then enrollment and billing is not required.
E.g.: All patients making less than $20,000 a year get free services

Citations:

- Chapter 16 §40 of the Medicare Benefit Policy Manual www.cms.gov/manuals/Downloads/bp102c16.pdf
- describes the prohibition against inducing Medicare beneficiaries (such as providing free services) by Medicare providers
- Office of the Inspector General (OIG) issued a Special Advisory Bulletin titled "Offering Gifts and Other Inducements to Medicare Beneficiaries" in August 2002

Is There an Alternative to Enrolling In and Billing Medicare?

YES!

- Do not accept Medicare beneficiaries
- If a Medicare beneficiary approaches you for treatment and you do not want to enroll in and bill Medicare for the services, then you must turn the patient away
- You are allowed to say no to Medicare beneficiaries
- Even if a beneficiary is willing to pay you out of pocket, you can only see him/her if you enroll in and bill Medicare
- Alternately, SLPs could provide services "incident to" a physician

Is My Obligation to Enroll and Bill Medicare New?

- July 16, 2008 – MIPPA passed
  The Medicare Improvements for Patients and Providers Act (MIPPA) included a provision that allowed SLPs in private practice to directly bill the Medicare program **effective July 1, 2009**
- June 2, 2009 – The Centers for Medicare and Medicaid Services began accepting enrollment applications
- Not new for audiology

What Is the Enrollment Process?

Step 1: Get your National Provider Identifier (NPI)

Step 2: Enroll as an individual (855-I), enroll as a business (855-B), and/or reassign your benefits to your practice via the 855-R

Step 3: Once approved, submit claims

www.asha.org/practice/reimbursement/medicare/SLPmedicareenroll/

What Are the Consequences for Failure to Enroll and Submit Claims?

- Compliance with mandatory claim filing requirements is monitored by CMS
- Violations of the requirement may be subject to:
  - A civil monetary penalty of up to $2,000 for each violation
  - A 10 percent reduction of a physician's/supplier's payment once the physician/supplier is eventually brought back into compliance
  - And/or Medicare program exclusion
- Medicare beneficiaries may not be charged for preparing or filing a Medicare claim

https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNMattersArticles/downloads/SE0908.pdf

Practical Tips for Medicare Compliance

Billing and documentation requirements

How is Medicare Administered?

https://med.noridianmedicare.com/

How is Medicare Administered?

Medicare Administrative Contractors (MACs) issue local coverage determinations (LCDs):

- CPT and ICD-10 codes are considered medically necessary (may require specific pairing for coverage)
- Impose limitations on coverage
- May be general for clinical specialty or specific to types of services provided (e.g., dysphagia, vestibular)

Medicare Coverage Database:
https://www.cms.gov/medicare-coverage-database/

Medicare Part B

- Known as the Medicare Physician Fee Schedule (MPFS)
- Retrospective payment methodology for outpatient services under Part B of the Medicare program provided in:
  - Private practice
  - CORF
  - SNF (Part B)
  - Home Health (Part B)
  - Outpatient hospital department
- Fee schedule payment tracks to the calendar year (January-December)
- Annual changes required by law or developed by CMS are proposed through a rulemaking process
  - Proposed rule typically issued around July 1 each year
  - 60-day comment period provided
  - Final rule typically issued on or before Nov. 1 each year

Payment Policies: Multiple Procedure Payment Reduction (MPPR) (SLP Services)

- Developed to adjust payment "to more appropriately reflect reduced resources involved with furnishing the service for certain sets of services frequently furnished together"
- Payment reduced for the second and subsequent services within the same MPPR category furnished in the same session/day

Payment Policies: How Does MPPR Work? (SLP Services)

- MPPR **ONLY** reduces the practice expense value; therefore, the entire value of the code is not reduced
- Applicable to "always therapy" services delivered on the same day regardless of therapy discipline
- Code with highest practice value is paid at full amount; each subsequent code is subjected to the MPPR reduction

Payment Policies: Therapy Cap (SLP Services)

- Blunt mechanism for controlling costs associated with therapy/rehab services
- One cap for OT and a separate cap for PT/SLP combined
  - SLP has only been an independent benefit since 2008
- Cap amount for 2017 = $1,980
- Annual cap (January–December) applicable to all services a Medicare beneficiary receives over the course of the year, regardless of treatment setting or diagnosis
  - E.g., patient treated in HOPD in January for a fall; patient treated in private practice for stroke in September – one cap
- Increases each year by approximately $20
- Can exceed the cap by using KX modifier on claims
  - Requirements for billing for services same below and above cap
  - www.asha.org/Practice/reimbursement/medicare/overview_exception/

Payment Policies: Manual Medical Review (MMR) (SLP Services)

- $3,700 threshold for OT
- $3,700 threshold for PT/SLP combined
- Administered by the Supplemental Medical Review Contractor (SMRC), Strategic Health Solutions, LLC
- First additional documentation requests (ADRs) issued late April 2016 for services provided July 2015–present
- Same criteria for coverage below and above the threshold – medically necessary, skilled services

Payment Policies: Manual Medical Review (MMR) (SLP Services)

- Who's targeted:
  - Providers with a high percentage of patients receiving therapy beyond the threshold as compared to their peers during the first year of Medicare Access and CHIP Reauthorization Act (MACRA)
  - Providers delivering "a lot" of minutes or hours of therapy per session
  - Therapy provided in SNFs, therapists in private practice, and outpatient physical therapy or speech-language pathology providers (OPTs) or other rehabilitation providers
- MMR process:
  - Request 40 records (ADRs)
  - SMRC has 45 days to review, issue decision on all 40 records at once
  - Compare like providers (e.g., SNF to SNF; private practice to private practice)
  - Informal discussion period, then move to appeals process

Payment Policies: Functional Limitation Reporting (SLP Services)

- Has been in place since Jan. 1, 2013
  - Required for all therapy services (e.g., below and above the cap)
- Use of G-codes primarily tied to evaluation codes
  - Reported at first visit, discharge, every date of service when an evaluation code is billed, and every 10th treatment visit
- Claims without the functional limitation G-codes will be returned unpaid
  - Can resubmit as a corrected claim
  - Documentation must support G-codes submitted
- CMS functional limitation reporting FAQ: https://www.cms.gov/Medicare/Billing/TherapyServices/Downloads/Functional-Reporting-PT-OT-SLP-Services-FAQ.pdf

Payment Policies: Functional Limitation Reporting

Practical Tips:

- **Report one treatment goal at a time**

  Ongoing reporting (but not treatment) is limited to one condition/disorder/functional limitation at a time, even for those patients who qualify and will be treated for multiple categories. The primary functional limitation should be chosen, and, after the treatment goal is achieved for the primary, a subsequent functional limitation should be reported.

- **Include the -GN modifier**

  The therapy modifier -GN is required on the claim form to indicate the therapy service is furnished under the SLP plan of care. The -GN modifier is also required for all of the G-codes reported on the claim.

Physician Quality Reporting System (PQRS)

- PQRS applies to both audiologists and SLPs
- No reporting in 2017 or 2018
- Payment adjustments for 2016 reporting will still be imposed in 2018
- Voluntary reporting under Merit-Based Incentive Payment System (MIPS) is an option but CMS has provided no guidance.
- Mandatory reporting under MIPS TBD- probably 2019
- Many of these measures moving to new quality reporting program- MIPS

Medicare Documentation Requirements: SLP

Plan of care

- Diagnoses
- Long-term treatment goals
- Type (PT, OT, SLP)
- Amount (# of times/day therapy delivered)
- Duration (# of weeks or treatment sessions)
- Frequency (# of times/week therapy delivered)

Medicare Documentation Requirements: SLP

Progress note

- Assessment of improvement, extent of progress (or lack thereof) toward each goal
- Plans for continuing treatment, reference to additional evaluation results, and/or treatment plan revisions should be documented in the clinician's Progress Report
- Changes to long- or short-term goals, discharge, or an updated plan of care that is sent to the physician/non-physician practitioner for certification of the next interval of treatment

Medicare Documentation Requirements: SLP

Daily treatment note

- **Date of treatment**
- **Each intervention/modality**
  Identification of each specific intervention/modality provided and billed, for both timed and untimed codes, in language that can be compared with the billing on the claim to verify correct coding. Record each service provided that is represented by a timed code, regardless of whether or not it is billed because the unbilled timed services may impact the billing.
- **Length of time of treatment**
  Total timed code treatment minutes and total treatment time in minutes.
  Total treatment time includes the minutes for timed code treatment and untimed code treatment. Total treatment time does not include time for services that are not billable (e.g., rest periods).
- **Signature and professional identification**
  Of the qualified professional who furnished or supervised the services and a list of each person who contributed to that treatment
  (E.g., the signature of Kathleen Smith, PTA, with notation of phone consultation with Judy Jones, PT, supervisor, when permitted by state and local law)

Medicare Documentation Requirements: Audiology

Physician order

- Obtained **prior to delivery** of services
- Must include **date of request** by ordering provider and NPI of ordering provider on claim
- Can be issued by:
  - Physician
  - Nurse practitioner
  - Clinical nurse specialist
  - Physician assistant
- Does not need to list specific services; can be determined by audiologist independently
- Can be:
  - Signed, written document
  - Telephone call (as documented by both the audiologist and physician)
  - Securely transmitted email
  - Note in the medical record (if the audiologist and physician work in the same practice)

Medicare Documentation Requirements: Audiology

Reason for test

- Failure of hearing screening
- Identification of cause of suspected hearing loss, tinnitus, or balance disorder
- Patient report of suspected change in hearing, tinnitus, or balance
- Re-evaluation because of changes in hearing, tinnitus, or balance status
- Monitor effect of medication, surgery, or other treatment
- Analyze and program cochlear or brainstem implant
- Evaluation from implant of prosthetic device or periodic evaluation following implantation

Medicare Documentation Requirements: Audiology

Justification of procedures billed

- Include code and procedures performed in a note along with the results of each procedure
- Include time spent with patient performing evaluation and time spent writing report
  - Must spend at least 31 minutes to bill for hour-long codes

THE FUTURE IS OURS TO CREATE

Healthcare Delivery and Payment is Transforming

- Fee-for-service = payment for ***quantity*** of care
- Value-based = payment for ***quality*** of care
- The trend is **moving toward value-based**
  (As a result of the Affordable Care Act in 2010)

Value: ***Improved quality at reduced cost***

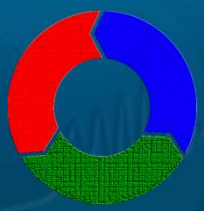
Medicare Payments are Transitioning

The Centers for Medicare and Medicaid Services (CMS)

- Mandated (and funded) by ACA to find other sorts of payment models that might work
- Formed the Center for Medicare and Medicaid Innovation (Innovation Center)
- Develops and tests various payment and delivery models

Alternative payment models are a means of achieving the goal of value-based care

CMS's Triple Aim



- **Better care**
  - Coordinated care, alternative payment models
- **Smarter spending**
  - Evidence-based care and eliminate duplicative services
- **Healthier people**
  - Patient-centered, incentive for outcomes

CMS Payment Framework

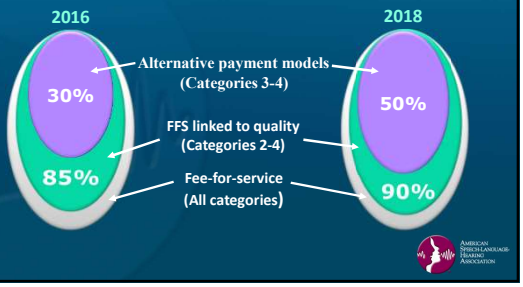
Fee-for-Service (volume) → Value (quality + cost)

	Category 1: Fee for Service—No Link to Quality	Category 2: Fee for Service—Link to Quality	Category 3: APMs Built on Fee-for-Service Architecture	Category 4: Population-Based Payment
Description	Payments are based on volume of services and not linked to quality or efficiency	At least a portion of payments vary based on the quality or efficiency of healthcare delivery	Some payment is linked to the effective management of a population or an episode of care. Payments still triggered by delivery of services, but opportunities for shared savings or 2-sided risk	Payment is not directly triggered by service delivery so volume is not linked to payment. Clinicians and organizations are paid and responsible for the care of a beneficiary for a long period (i.e., >1 yr)
Medicare FFS	• Limited in Medicare fee-for-service • Majority of Medicare payments now are linked to quality	• Hospital value-based purchasing • Physician value-based modifier • Readmissions/Hospital Acquired Condition Reduction Program	• Accountable care organizations • Medical homes • Bundled payments • Comprehensive primary care initiative • Comprehensive ESRD • Medicare-Medicaid financial alignment initiative fee-for-service model	• Eligible Pioneer accountable care organizations in years 3-5

Source: CMS

Why This Matters

The percentage of Medicare FFS payments linked to quality and alternative payment models is growing!



Description of Alternative Payment Models

Alternative Payment Models (APMs)

- Accountable care organizations
- Episode of care
- Bundled payment
- Patient-centered medical home

Accountable Care Organizations (ACOs)

ACOs

- Assume accountability for the cost and quality of care for a **defined population of patients**
- Coordinate the services of its providers in various healthcare settings to manage patients' needs
- Health information technology is integral
- Can be hospital-driven or hospital/provider arrangements
- Medicare and private sector ACOs exist

www.beckershospitalreview.com/lists/100-accountable-care-organizations-to-know-2015.html

Episode of Care

Encompasses all services provided to a patient with an **identified condition** within a **specific period of time** across a continuum of care in an integrated healthcare system (e.g., Stroke)

Example: Stroke

Episode of Care

60 Days

- Hospitalization
- Testing
- Surgery
- Therapy

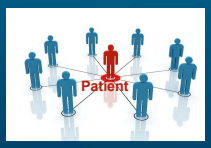
- Did services improve outcome?
- Was spending reduced?
- Was treatment completed within the required timeframe?

Bundled Payment

- Represents a single fixed payment for an identified condition
- Better coordination of care for patients
- Works really well for procedures/services with a **discrete stop/end time**
- Can also be implemented for **chronic conditions**

Patient-Centered Medical Home (PCMH)

- A model, not a "home"
- The PCP coordinates care with other providers ("gatekeeper")
- Enhanced care coordination and communication, particularly useful for chronic conditions
- Intended to minimize fragmentation of information between providers
- Can be integrated into ACOs



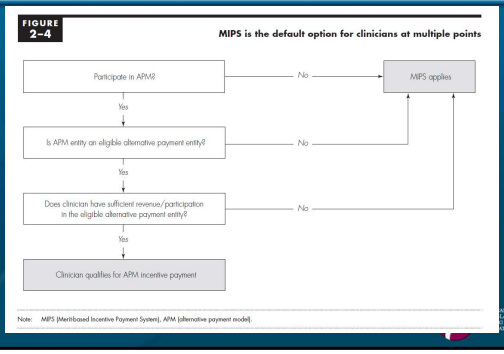
APMs under MACRA

Medicare Access and CHIP Reauthorization ACT (MACRA)

- Transitions Medicare outpatient payment to payment based on quality, outcomes, and efficiency
- Repeals sustainable growth rate (SGR)
- To learn about the Quality Payment Program: https://qpp.cms.gov/

Merit-Based Incentive Payment System (MIPS) or Alternative Payment Models (APMs)?

Chart Courtesy of MedPAC



Who Is a MIPS-Eligible Clinician (EC)?

Included in MIPS:

- 2019-2020: Restricted to physicians, physician assistants, nurse practitioners, clinical nurse specialists, nurse anesthetists, and group practices
- **2021+: Others, including SLPs and audiologists**
  - **Can participate as early as 2017 to "gain experience"**
- Participants in non-advanced APMs

Excluded from MIPS:

- Newly enrolled clinicians (in Medicare)
- Qualifying and partial qualifying APM participants
- Clinicians who do not exceed the low-volume threshold (charge less than or equal to $30,000 ***OR*** care for 100 or fewer Part B-enrolled beneficiaries)
- Unlikely for facility-based providers

Merit-Based Incentive Payment System (MIPS)

- Composed of four categories
  - Quality (PQRS)
  - Clinical Practice Improvement Activities (CPIA) (new)
  - Advancing Care Information (ACI) (meaningful use)
  - Cost (value modifier)
- Beyond pay for reporting
  - Scores compared to a benchmark to compare quality
  - "High" quality, positive adjustment
  - "Low" quality, negative adjustment

MIPS Performance Category Weights (2019 Adjustment)

TABLE 29: Final Weights by Performance Category

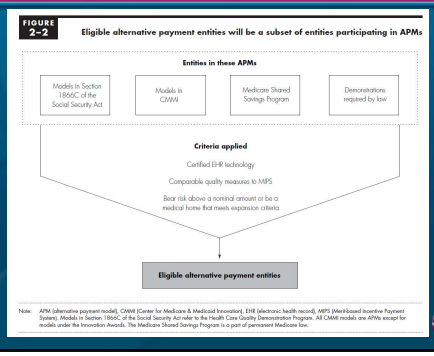
Performance Category	2019 MIPS Payment Year	2020 MIPS Payment Year	2021 MIPS Payment Year and beyond
Quality	60%	50%	30%
Cost	0%	10%	30%
Improvement Activities	15%	15%	15%
Advancing Care Information*	25%	25%	25%

*The weight for advancing care information could decrease (not below 15 percent) if the Secretary estimates that the proportion of physicians who are meaningful EHR users is 75 percent or greater. The remaining weight would then be reallocated to one or more of the other performance categories.

MIPS Adjustment Factor

What Qualifies as an Advanced APM?

Chart Courtesy of MedPAC



Why Should Providers Participate in an Advanced APM?

Audiologists and SLPs who are qualified Advanced APM participants will receive a 5% bonus payment for covered Part B Medicare payments

Advanced APM Requirements

The clinician:

- Participates in an APM that requires use of certified EHR technology
- Uses quality measures comparable to the Merit-Based Incentive Payment System (MIPS)
- Either bears financial risk for monetary losses in excess of a nominal amount or is a PCMH under section 1115A

Requirements for Participation in an Advanced APM

Payment Threshold (% of payments)
That must be attributable to services furnished through an advanced APM

Payment Threshold	2019-2020	2021–2022	2023 and beyond
Medicare only	25%+	50%+	75%+
Combination all-payer and Medicare	N/A	50% (all-payer) 25% (Medicare)	75% (all-payer) 25% (Medicare)

Requirements for Participation in an Advanced APM

Patient count threshold (% of patients)
That must be attributable to services furnished through an advanced APM

Patient Count Threshold	2019-2020	2021–2022	2023 and beyond
Medicare only	20%+	35%+	50%+
Combination all-payer and Medicare	N/A	35% (all-payer) 20% (Medicare)	50% (all-payer) 20% (Medicare)

Coding for Reimbursement

Coding for Reimbursement

- Billing codes are what are used to communicate information to payers via a claim form regarding:
  - Patient's diagnosis (ICD-10-CM codes)
  - Services provided (CPT codes)
- Documentation and information in the medical record must support the reported CPT and ICD-10 codes

Reporting the Diagnosis

ICD-10-CM Codes

ICD-10-CM Codes

- International Classification of Diseases, 10th Revision, Clinical Modification
- Used in the U.S. to assign diagnosis codes to diseases and disorders, based on body systems
  - Contains about 68,00 codes
  - 3-7 alphanumeric characters
  - Updated annually
  - Required by the Health Insurance Portability and Accountability Act (HIPAA) for health care billing

Speech-Language Pathology Examples

- F80.0 Phonological disorder; Functional speech articulation disorder
- F80.1 Expressive language disorder
- F80.8 Childhood onset fluency disorder
- I69.320 Aphasia following cerebral infarction
- J38.2 Nodules of vocal cords
- R13.11 Dysphagia, oral phase
- R48.8 Other symbolic dysfunctions
- R47.01 Aphasia
- R49.21 Hypernasality

ICD-10-CM Coding Principles

- Always code to the highest degree of specificity available (carry out to the furthest digit possible)
  - **R13.11** Dysphagia, oral phase **not R13.1** Dysphagia
- Codes designated as "**other**" or "**other specified**" indicate that sufficient documentation exists to assign a diagnosis, but no code exists for the specific condition
- Codes designated as "**unspecified**" or **"not otherwise specified" (NOS)** indicate that that there is insufficient information in the medical record to assign a more specific code
- When possible, use "other" and avoid "unspecified."
- However…there may be instances when "unspecified" is the best/only choice.
  - For example…hearing screening for newborn
  - **H91.90** (unspecified hearing loss, unspecified ear) or one of the other codes in the H91.9 series for unspecified hearing loss.

ICD-10-CM Coding Principles

- Primary and secondary diagnoses
  - Primary or first listed: Condition chiefly responsible for the visit (reason you are seeing the patient)
  - Secondary or medical diagnosis: Co-existing conditions, symptoms, or reasons
  - For example:
    - **R49.0** (dysphonia, hoarseness) = primary and **J38.2** (nodules of vocal cords) = secondary
  - Some settings or payers may require reverse order
  - Exceptions will also be noted in code descriptions as "**code first**" or "**use additional**"
    - **R13.1** Dysphagia
      - Code first, if applicable, dysphagia following cerebrovascular disease…

ICD-10-CM Coding Principles

Excludes1 and Excludes2 Notes

- Excludes1 indicates that the codes excluded should never be used at the same time as the code above the "Excludes1" notation.
  - Used when two conditions cannot occur together, such as the congenital form of a condition versus an acquired form of the same condition.
  - For example, H93.25 for central auditory processing disorder (CAPD) has an "Excludes1" note that prevents clinicians from coding it with F80.2 for mixed receptive-expressive language disorder.
- Excludes2 indicates codes that may be listed together because the conditions may occur together, even if they are unrelated.
  - When an "Excludes2" notation appears under a code, it is acceptable to use both the code and the excluded code together.

ICD-10-CM Coding Principles

Coding normal results

- There are no ICD-10-CM codes to reflect a normal result
- Instead, the *signs and symptoms*, *chief complaint*, or *reason for the encounter* should be reported as the primary diagnosis
- List any additional codes that describe coexisting conditions
- An evaluation to "rule out" a condition is not recognized as a coding convention and should not be used

ICD-10-CM Coding Principles

Developmental or Organic?

- Organic-based speech, language, or swallowing problems, like those related to cleft palate and cerebral palsy, are coded typically in the R00–R99 (ICD-9-CM 784) series of codes. For example:
  - The code for oral phase dysphagia is R13.11. The code for dysarthria of speech (not related to a cerebrovascular accident) is R47.1, which may be descriptive of the speech of a patient who has cerebral palsy.
  - For a patient with language deficits related to an organic or medical condition, code R48.8 (other symbolic dysfunctions) is often used by SLPs to describe the deficit.
- When there is an underlying medical condition contributing to the speech or language deficit, this information should also be included on the claim.

ICD-10-CM Coding Principles

Developmental or Organic?

- For a child with no related medical condition but who has speech and/or language deficits, look for codes in the F80 series. For example:
  - F80.2, mixed receptive-expressive language disorder

One exception:

- The R47 code series (organic speech disturbance) specifically excludes autism.
- Typically, for patients with organic conditions, such as autism, we recommend codes in the R47 and R48 series.
- Since the R47 speech disturbance codes exclude autism in ICD-10, an option is to use F80.0, articulation or phonological impairment of a developmental nature.
- ASHA is seeking information on the R47 coding note

ICD-10-CM Coding Principles

Last but not least…

- ICD code (reason) and CPT code (procedure) should correspond for encounter
- Example:
  - **R13.11** Dysphagia, oral phase (ICD)
  - **92610** Clinical swallow evaluation (CPT)

What's New for ICD-10-CM: SLP

There are no major changes for SLP for 2017-2018. As a reminder, here are the most recent changes for 2016-2017.

Effective October 1, 2016, new codes for…

F80.82 Social pragmatic communication disorder

- Found in the section of codes for developmental and functional speech-language impairments
- SLPs currently use F80.2 (mixed receptive-expressive language disorder)
- Social pragmatic communication deficits related to medical conditions should still be coded under R48.8 (other symbolic dysfunctions)

What's New for ICD-10-CM: SLP

Effective October 1, 2016, more new codes for:

- Cognitive deficits following cerebrovascular disease in the **I69** series
- Too many to list here!
- Currently, ICD-10-CM includes only general codes for cognitive deficits related to CVA
- Each category of CVA now has new codes to capture:
  - Attention and concentration deficit
  - Memory deficit
  - Frontal lobe and executive function deficit
  - Cognitive social or emotional deficit

ICD-10-CM Resources

- www.asha.org/Practice/reimbursement/coding/ICD-10/
  - ICD-10 FAQsICD-9 to ICD-10 Mapping Tool (not updated for 2017)
  - ICD-9 to ICD-10 Mapping Spreadsheets (not updated for 2017)
  - ICD-10-CM Code Lists
- www.asha.org/Practice/reimbursement/coding/New-and-Revised-ICD-10-CM-Codes-for-Audiology/
- www.asha.org/Practice/reimbursement/coding/New-and-Revised-ICD-10-CM-Codes-for-SLP/

Reporting What You Do

CPT Codes

CPT Codes

- Current Procedural Terminology (CPT)
  - Used in the U.S. to report medical, surgical, and diagnostic procedures
  - Contains about 8,000 codes
  - Five-digit code
  - Updated annually
  - Three components of a CPT code are used to determine rates in fee-for-service models (fee schedules)
    - Professional work (mental effort, judgment, skill, mental/physical effort, and time required to perform the service)
    - Practice expense (supplies, equipment, overhead)
    - Professional liability/insurance costs

Speech-Language Pathology Examples

Table 2. National Medicare Part B Rates for Speech-Language Pathology Services

Speech-language pathology services are paid at non-facility rates, regardless of setting. All claims should be accompanied by the –GN modifier to indicate services provided under speech-language pathology plan of care.

CPT Code	Descriptor	2016 National Fee	Notes
31579	Laryngoscopy, flexible or rigid fiberoptic, with stroboscopy	$216.04	This procedure may require physician supervision based on Medicare Administrative Contractors' (MACs') local coverage policies or state practice acts. See ASHA's website for more information.
92507	Treatment of speech, language, voice, communication, and/or auditory processing disorder; individual	$79.90	
92508	group, 2 or more individuals	$23.29	
92511	Nasopharyngoscopy with endoscope (separate procedure)	$113.93	This procedure may require physician supervision based on MACs' local coverage policies or state practice acts. . See ASHA's website for more information.
92512	Nasal function studies (eg, rhinomanometry)	$61.98	
92520	Laryngeal function studies (ie, aerodynamic testing and acoustic testing)	$76.67	
92521	Evaluation of speech fluency (eg, stuttering, cluttering)	$112.14	
92522	Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria)	$93.51	Do not bill 92522 in conjunction with 92523.
92523	Evaluation of speech sound production (eg, articulation, phonological process, apraxia, dysarthria); with evaluation of language comprehension and expression (eg, receptive and expressive language)	$195.98	Do not bill 92523 in conjunction with 92522.
92524	Behavioral and qualitative analysis of voice and resonance	$90.29	This procedure does not include instrumental assessment.
92526	Treatment of swallowing dysfunction and/or oral function for feeding	$86.70	

CPT Coding Principles

Use of Physical Medicine Codes (97000 Series)

- Medicare CCI edit policy states that SLPs should not use (other payers may follow):
  - **97110** Therapeutic exercises, each 15 min.
  - **97112** Neuromuscular re-education, each 15 min.
  - **97535** Self-care/home-management training, each 15 min.
- Medicare may allow (check LCDs):
  - **CPT 97532** Cognitive skills development, each 15 min.
  - **CPT 97533** Sensory integration, each 15 min.
- **97532** Cognitive Skills Development
  - Only 97000 code widely accepted for use by SLP
  - Cannot bill on the same day as 92507 (speech/language/communication treatment)
- Billing 97532 or another 97000 code in addition to a speech-language or swallowing code may be considered "unbundling" or "upcoding"

CPT Coding Principles

- **Untimed codes**
  - Most CPT codes reported by audiologists and SLPs are not timed codes and represent a "typical" visit length (e.g., 92507, speech/language/communication tx or 92557, comprehensive audiometry)
  - Untimed codes are billed once per visit and paid a set rate, regardless of the length of the visit
- **Timed code requirements**
  - Time documented must correspond to number of units billed on the claim
  - Time spent must exceed halfway point dictated by the code:
    - 1-hour unit ≥ 31 minutes
    - ½-hour unit ≥ 16 minutes
    - 15-minute unit ≥ 8 minutes
  - Subsequent timed units may not be counted until the full value of the first code plus ½ of the value of the second code is exceeded
  - Modifier -52 (shortened procedure) may not be used to bypass the time requirements

CPT Coding Principles

Timed codes for SLPs

- **92607**: Evaluation for prescription of speech-generating device, first hour
- **92608**: Each additional 30 min.
- **92626**: Evaluation of auditory rehabilitation status, first hour
- **92627**: Each additional 15 min.
- **96105**: Assessment of aphasia, per hour (includes interpretation and report time)
- **96125**: Standardized cognitive performance testing, per hour (includes interpretation and report time)
- **97532**: Development of cognitive skills, each 15 min.

CPT Coding Principles

- Modifiers
  - **-59**: Distinct procedural service
    - Only modifier used with CCI edits for audiology and SLP-related codes
    - For two procedures not ordinarily performed on the same day by the same clinician but which, under certain circumstances, may be appropriate to perform – and therefore code – on the same day (e.g., different site or organ system)
      - 92611 (MBS) and 92610 (clinical swallow evaluation)
      - 92620 (Central auditory function evaluation) and 92626 (auditory rehabilitation status evaluation)
  - **-52**: Reduced services
    - Use under certain circumstances, when a service is partially reduced or eliminated at the discretion of the clinician. Use of this modifier should not change the identification of the basic service described by the code.
  - **-22**: Increased procedural services
    - Use when the work required is substantially greater than typically required. Documentation must support the additional work and the reason for it. Use this with caution!

What's New for CPT: SLP

Effective January 1, 2018…

97127 Therapeutic interventions that focus on cognitive function (e.g., attention, memory, reasoning, executive function, problem solving, and/or pragmatic functioning) and compensatory strategies to manage the performance of an activity (e.g., managing time or schedules, initiating, organizing and sequencing tasks), direct (one-on-one) patient contact

(Do not report 97127 in conjunction with 0364T, 0365T, 0368T, 0369T)

(Report 97127 only once per day)

What's New for CPT: SLP

- This new code replaces 97532 (cognitive skills development, each 15 minutes). 97532 will be deleted effective January 1.
- 97127 is untimed and can only be billed once per day.
- Medicare may not accept 97127 and is proposing its own 15-minute code for Medicare use. Details will be available in the November release of the Medicare Physician Fee Schedule for 2018.

More information will be posted on http://www.asha.org/practice/reimbursement/coding/new_codes_slp.htm

What's New for CPT: Audiology and SLP

New CPT code modifiers, effective January 1, 2018…

Modifier 96 (Habilitative services)
When a service or procedure that may be either habilitative or rehabilitative in nature is provided for habilitative purposes, the physician or other qualified health care professional may add modifier X8 to the service or procedure code to indicate that the service or procedure provided was a habilitative service. Habilitative services help an individual learn skills and functioning for daily living that the individual has not yet developed, and then keep and/or improve those learned skills. Habilitative services also help an individual keep, learn or improve skills and functioning for daily living.

Modifier 97 (Rehabilitative services)
When a service or procedure that may be either habilitative or rehabilitative in nature is provided for rehabilitative purposes, the physician or other qualified health care professional may add modifier X9 to the service or procedure code to indicate that the service or procedure provided was a rehabilitative service. Rehabilitative services help an individual keep, get back, or improve skills and functioning for daily living that have been lost or impaired because the individual was sick, hurt or disabled.

What's New for CPT: Audiology and SLP

- ACA-compliant plans may use these new modifiers to track habilitative and rehabilitative benefits.
- These new modifiers will not replace existing modifier **SZ** (habilitative services)
- Check with your payers regarding implementation of the new modifiers
- For examples of habilitative and rehabilitative services, see http://www.asha.org/uploadedFiles/Rehabilitative-Habilitative-Services-Devices.pdf

Acronyms

- **ACA:** Affordable Care Act (Obamacare)
